NAME

swfextract - a tool for extracting data out of swf files.

Synopsis

swfextract [*options*] [*file.swf*]

DESCRIPTION

swfextracts allows to extract swf movieclips and objects out of swf files.

SWF files are animation files which can be displayed in Web Browsers using the Flash Plugin.

OPTIONS

-h, --help

- Print short help message and exit
- o, --output** *filename*
Write output to file *filename*
- V, --version**
Print version info and exit
- i, --id** *ids*
ids is a range of IDs to extract. E.g. 1-10,14
- j, --jpegs** *ids*
ids is a range of JPEG IDs to extract. E.g. 1-2,3,14-
- p, --pngs** *ids*
ids is a range of PNG IDs to extract. E.g. -10,20-30
- f, --frame** *frames*
frames is a range of frames to extract. E.g. 1-10,20-30,40-
- n, --name** *name*
Set the name of the object to extract to *name*.
- w, --hollow**
Copy empty frames to the output file, too.
- P, --placeobject**
Copy original placeobject tag for the given object into the output file (Use with -i). This means that the object is at the same position in the generated movie as in the original movie.
- j, --jpegs** *range*
Extract jpeg pictures in *range*
- p, --pngs** *range*
Extract png pictures in *range*
- m, --mp3**
Extract main mp3 stream (There may be substreams in the Movieclips, as well. To extract these, first extract the Movieclips with -i and then use -m)
